

OPEN MRI FOR SPINE IMAGING

Walk-in – Stand-up – Sit Down

**Flexion Extension Spine Views –
Effects of Intervertebral Disc Displacement
(IVD) Examined**

Anxiety/Body Habitus – No Problem

**Canada's only upright open MRI unit located
in Kamloops BC.**

- Most MRI machines are a tunnel design. This unique scanner allows patients to sit comfortably or stand-up while having their MRI.
- Perfect for patient with back or neck pain.
- Flexion and extension views of the cervical and lumbar spine can demonstrate instability, changes in the size and shape of disc herniation, nerve root compression and changes in the degree of spinal stenosis not readily apparent on regular MRI.
- The ability to image joints such as the knees with the patient's weight bearing provide additional information about ligament and meniscal abnormalities.
